This report describes the characteristics of the county’s 60-plus population in 2010, and changes that have occurred since 2000. This chart book also includes population characteristics such as education, income level, marital status, and living arrangement that are shown to be associated with the need for long-term services and supports. There are also charts that compare the older population of the county to the state as a whole.

In addition, the projected size of the 60+ population for 2015-2030 and those expected to experience physical and/or cognitive disability are included. These projections are intended to assist planners, decisions makers, and service providers in preparing for the aging population, particularly those who will likely need assistance.

Profile of 60+ Population

	2000	2010	Ohio (2010)	U.S. (2010)
Total Population	9,611	11,537	2,287,424	57,085,908
Percent of Population Age 60+	17.7	21.7	19.8	18.5
Percent at or Below Poverty	12.7	10.6	11.8	11.7
Median Income	\$15,100	\$19,697	\$20,320	\$20,152
Percent White	97.6	97.4	88.7	78.7
Percent Married	64.9	64.1	57.5	57.7

Proportion of County's 60+ Population at or Below Poverty Threshold Income by Gender and Age Group, 2010

Proportion of 60+ Population at 4 or More Times Poverty Threshold Income by Gender and Age Group, 2010

In 2010, about 11% of the 60+ population in Ashland County had an annual income at or below the poverty level (about \$11,000 for an individual 65 and older). About 24% lived between poverty and two times the poverty income level (between \$11,344 and about \$22,700). Compared to the state as a whole, a higher percentage of Ashland County's 60+ population had incomes below three times the poverty threshold (56.4% v. 51.8%), and a lower percentage of older adults had incomes in the highest category of at least four times the poverty threshold (28.5% v. 32.8%). For the most part, poverty is more prevalent among older women in Ashland County. On the other hand, a lower percentage of women had income four or more times poverty threshold income at most ages compared to men.

Summary

This presentation of county population trends reveals important indicators of current and future need for long-term services and supports. The county's population is aging; the share of the population that is 60 years and older will continue to grow over the next 20 years. A higher proportion of the older population experiences poverty, compared to other adults. In addition, those at very advanced ages are mostly women who have outlived their spouses and most likely live alone. The combination of lower income, living alone and higher prevalence of disability among older women are all contributors to the need for long-term services and supports.
